Asia Pacific Next Generation

Impact of APAC

As of January 2023, there were **5.16 billion** Internet users worldwide, which is **64.4 percent** of the global population.

As of 2022, Asia was home to the biggest number of online users worldwide—over **2.9 billion** at the latest count.

Youth of APAC

As of 2022, APAC Internet usage was higher among individuals between 15 and 24 years old—over **2.1 billion** or around **73 percent** of its total online users.

APAC Internet usage among individuals between 15 and 24 years old represents approximately **26.2 percent** of the global population.

Role of Youth

The Internet has become an integral part of our daily lives, connecting people, businesses, and governments around the world.

To ensure the continued growth and success of the Internet, it is crucial to prepare the next generation for building and maintaining Internet infrastructure.

Role of Youth

Young people can bring fresh perspectives, creativity, and innovation to Internet infrastructure development.

By fostering a culture of innovation and creativity among young people, we can create a more dynamic and adaptive Internet infrastructure that meets the needs of the future.

Role of Youth

Staying up-to-date with the latest technologies is critical to Internet infrastructure development.

Young people, often more tech-savvy than their older counterparts, can enhance the performance and security of future Internet infrastructure and stay ahead of the curve.

Youth Initiatives

Do our youth initiatives align with the needs and interests of youth Internet users?

Youth initiatives mainly focused on technology, engineering, or Internet governance may not necessarily address the needs and interests of a broader range of youth Internet users.

Role of APNG

The role of the Asia Pacific Next Generation (APNG) in youth empowerment is leveraging new technologies and online platforms to engage with and empower diverse youth populations in the Asia-Pacific region.

Exploring our fast-evolving world, mediated by new technologies, more freely with the next generation can help ensure that youth in the region are prepared to thrive in an increasingly digital and interconnected world.

Role of APNG

Delving deep into online user communities and cultures can also help us better understand the needs and interests of youth in the region and identify opportunities to engage with and empower them.

By bringing more diverse youth populations together and creating opportunities for youth from different backgrounds to connect and collaborate, APNG can help break down barriers and foster greater understanding and inclusivity in the region.

Role of APNG

Empowering diverse youths with our vision for the Internet in the Asia-Pacific region can help inspire and mobilize young people to take action toward creating a more positive and equitable future for themselves and their communities.

Collaborations to Develop

1. **Inter-Asian Collaboration**
2. **Inter-Sectoral Collaboration**
3. **Inter-Generational Collaboration**

Collaborations to Develop

Inter-Asian Collaboration

- Provide a more diverse pool of mentors to help mentees gain exposure to a broader range of perspectives and approaches.
- Offer additional resources, such as training or networking opportunities, to help mentees build their skills and connect with others in their field.

Collaborations to Develop

Inter-Sectoral Collaboration

- Incorporate more voices from under-represented communities to ensure a truly inclusive and inter-sectoral approach.
- Provide opportunities for participants to develop initiatives and projects that address issues related to equity and access to technology.

Collaborations to Develop

Inter-Generational Collaboration

- Create more structured and formalized mentorship programs that provide ongoing support and guidance for young Internet leaders.
- Offer more opportunities for participants to collaborate on projects and initiatives that have a tangible impact on society.

Adapting to the New Normal Through Online Learning and E-services in Health and Education

ONLINE EDUCATION

Initiatives, applications, or Internet technologies that enable students, teachers, parents, and school administration to make online classes more effective and efficient. These include tools, software and processes used for online learning, webinars, online workshops, conferences and expos.

HEALTHCARE

Health-related initiatives, projects, and Internet technologies that mitigate and improve the condition of individuals and organizations as they address the pandemic. These include programs implemented to help ease the unexpected influx of patients in hospitals and efficiently manage limited resources.

ENTREPRENEURSHIP

Initiatives, projects, and Internet technologies that help develop startups and transform existing businesses to adapt to the new normal and be locally and globally competitive. These include new ways of utilizing social media for business delivery and continuity and consumer safety and convenience.

TECHNOLOGIES AND POLICIES

Other ways and means by which private and public organizations have adjusted their traditional operations in order to protect and ensure safe and secure online implementation of policies and procedures. These include blockchain, digital badges, online payments, and online donation platforms.

EDUCHIEL: Integration of Mental Health Practices in Students' Educational Habits through Machine Learning

Artificial Intelligence for Attendance-tracking and Proctoring

- Detection as opposed to recognition with respect to privacy regulations with opt-in option
- 3D real-time monitoring on 468 face landmarks without recording (default setting; possible opt-in)
- Monitors attentivity based on eye movements, microexpressions, and behaviour analysis
- Generates attendance and attentivity reports for class admin

ATTACK TOOLS

- Toolkits on kali linux that help you social engineer people with the info you gain from educational platforms (Social Engineering)
- Payments on e-learning platforms might be embedded with javascript skimmer
- Human error, through 3rd party platforms

ATTACK

- April 2020: "Zoom bombing"
- May 2020: Data breach in Unacademy, 22 million users of Unacademy were reportedly available for sale on darknet forums
- Sep 2020: Man arrested with threatening attack after "Zoom bombing" and making physical bomb threats
- Nov 2020-Mar 2021: Data breach at Florida: Broward County School District leaked in \$40m Ransomware Attack impacts 50,000 students and employee.
 - Broward County Public Schools Notice of Compromised Data Resulting from Security Incident(PDF)
- Mar 2021: Microsoft reported that cyber criminals have exploited vulnerabilities in Microsoft Exchange Servers to install ransomware on a network.

Our approaches (1/2)

An extended LMS with individual monitoring and feedback [5]

2.4 Tech Age Girls Project

Mobile ownership
% of Myanmar's population aged 15-65

In other words, women in Myanmar are 20% less likely to own a mobile than men. This is just one factor in the gender gap identified by GSMA Connected Women and India's Connected Women. In all cases, and middle-income countries in 2014/15, however, it is smaller than the gap for men and in some cases, women have higher mobile ownership rates (30% less likely to own a mobile than men), where per capita income is higher than Myanmar's.

Objective

- Gender gap – only 35% use technology
- To get Girls leadership in community
- (100) girls of age 16-20 yrs are recruited
- Train Technology and Leadership skills
- All are library based activity

Form development technique in Product Design Education

"Portable Library for Students in Remote Areas"

By Extended Hands

(Psylocke Antonio / Kalpesh Chaudhari / Alice Lau / Yuka Kataoka / Mendana Kere)

- We, "Extended Hands" focused on a problem of educational inequality of children in remote islands. Our NGO group "Portable library" will extend our hands to help them to ensure a quality of education and promote inclusive education.
- "Portable library" has three main features: 1) distribute **offline/online** network & devices for remote areas, 2) promote **the importance of education** especially in the remote areas/to our target audience, and 3) foster inclusive education.
- As an action plan, we will start our activity by following 3 stages 1) pilot run in our target area, 2) NGO-to-students stages to provide offline education, 3) NGO-to-student stage to provide online education

Education + Empowerment

Education and empowerment are critical for the youth in this digital age.

We must maintain the original spirit of the internet, apply valuable lived experiences to other newly emerging technologies, and fight against various forms of inequity, particularly the digital divide. By doing so, we can ensure that technology remains a tool for progress, equality, and positive change.
